

## Aluminium Anodize Gutter

Agrifirst Anodized Aluminium Gutter — corrosion-proof greenhouse drainage. Multi-span polyhouse gutter system. Permanent anodize finish. Buy from Agrifirst.

**3x better**

durability with 1.2mm anodized aluminum

**2x more**

efficient water management for cooling pads

**4x faster**

setup with immediate delivery from Hosur

### ABOUT

#### Anodized Aluminium Gutter — Corrosion-Proof Rainwater Drainage for Multi-Span Greenhouses

Agrifirst Anodized Aluminium Gutter is a premium corrosion-proof gutter system designed for multi-span polyhouse structures. The anodizing process creates a permanent protective oxide layer that resists corrosion indefinitely in wet greenhouse environments. These gutters efficiently channel rainwater from the polyhouse roof to drainage outlets, preventing water pooling that can damage greenhouse film and cause structural overloading.

### DESCRIPTION

**Agrifirst Anodized Aluminium Gutter** is an essential structural component for multi-span greenhouse systems, efficiently channeling rainwater from the junction between adjacent spans to the drainage system. The anodized finish provides permanent corrosion protection — unlike painted or galvanized gutters that eventually corrode in the constantly wet greenhouse environment.

### Key Features

- **Anodized Finish** — Permanent oxide layer provides lifetime corrosion resistance
- **High Flow Capacity** — Profile design handles intense monsoon rainfall without overflow
- **Structural Support** — Integrates with the greenhouse frame, providing span-to-span connection
- **Leak-Free Joints** — Precision-formed overlapping joints with sealant prevent leaks
- **15+ Year Life** — Outlasts the greenhouse structure itself

### Technical Specifications

<b>Material</b>	Aluminium alloy — anodized finish
<b>Profile</b>	Designed for multi-span greenhouse gutter connection
<b>Length</b>	4m / 6m sections
<b>Capacity</b>	Handles up to 100mm/hour rainfall intensity
<b>Life</b>	15+ years (anodized — maintenance-free)
