

Aluminium Profile 0.9 mm

Agrifirst 0.9mm Aluminium Profile — heavy-duty film locking channel for polyhouse cladding. Firm grip, easy film replacement. Professional greenhouse hardware.

3x longer

lifespan with rust-free design

2x better

stability for greenhouse structures

4x improved

crop yield with heat prevention

ABOUT

0.9mm Aluminium Profile — Premium Film Locking Channel for Greenhouse Cladding

Agrifirst 0.9mm Aluminium Profile is a heavy-duty greenhouse film locking channel used to secure polyethylene cladding to the polyhouse structure. This profile-and-zigzag-wire system provides a firm, uniform grip on the film while allowing easy removal and reinstallation during film replacement — the industry-standard fastening method for professional greenhouse construction.

DESCRIPTION

Agrifirst 0.9mm Aluminium Profile is a professional-grade film locking channel used to secure greenhouse polyethylene films to the structural frame. The aluminium profile is fixed to the frame, and the film is locked into it using a zigzag wire (spring wire) — creating a tight, uniform grip that holds the film securely without puncturing it.

Key Features

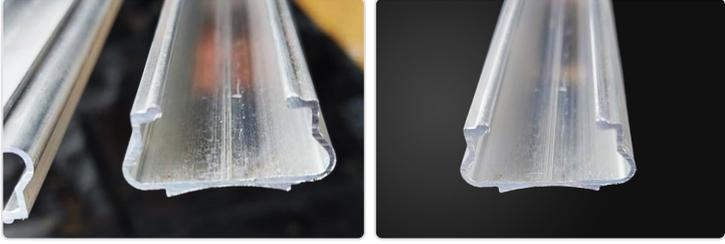

- **0.9mm Thickness** — Heavy-duty construction for maximum durability and wind-load resistance
- **Corrosion Resistant** — Aluminium naturally resists corrosion in humid greenhouse environments
- **No Film Puncture** — Film is locked by spring wire pressure, not by nails or screws that create leak points
- **Easy Film Changes** — Remove zigzag wire, swap film, re-insert wire — quick and tool-free
- **Universal Fit** — Compatible with all standard greenhouse films (100–200 micron)

Technical Specifications

Material	Extruded aluminium alloy
Thickness	0.9mm (heavy-duty)
Profile Width	Standard greenhouse profile
Length	4m / 6m sticks
Application	Film locking on greenhouse frame — roof, walls, gable ends
Compatible With	All Agrifirst zigzag wire and greenhouse films
