

Cabbage

Cabbage farming in nethouse provides protection from pests and weather. Reliable crop with consistent yields under protected cultivation.

ABOUT

Clean, Compact Cabbage with Nethouse Protection

Cabbage is a dependable, high-volume crop that benefits significantly from nethouse protection against pests and weather damage. Agrifirst nethouse solutions help farmers produce tighter, heavier heads with better shelf life.

DESCRIPTION

Cabbage is a staple vegetable with steady year-round demand across India. Under Agrifirst's nethouse protection, cabbage heads develop into tighter, heavier, cleaner heads compared to open-field production — commanding better prices and reducing post-harvest losses significantly.

Why Grow Cabbage Under Agrifirst Protection?

- **Heavier, tighter heads** — Controlled conditions produce compact 1.5–3 kg heads ideal for market
- **Pest protection** — Nethouse eliminates the major cabbage pests without chemicals
- **Better shelf life** — Protected cabbage stays fresh longer, reducing post-harvest losses
- **Weather protection** — Safe from hailstorms, heavy rain, and excessive heat
- **Consistent supply** — Enables contract farming with processors and retail chains

How Agrifirst Helps You Succeed

Agrifirst's insect-proof nethouse structures provide the perfect balance of protection and ventilation for cabbage. Our structures reduce pest pressure by 80–90% while maintaining good air circulation that prevents fungal diseases. Combined with efficient drip irrigation, Agrifirst solutions help farmers produce premium quality cabbage with minimal input costs and maximum returns.

Expected earnings: ₹4–8 lakhs per acre annually with Agrifirst nethouse cabbage cultivation.
