

Coriander (Dhania)

Coriander cultivation in nethouse produces clean, pest-free leaves. India's most essential culinary herb with constant market demand.

ABOUT

India's Essential Herb — Clean Coriander Year-Round

Coriander (Dhania) is used in every Indian kitchen daily. Agrifirst nethouse protection produces clean, vibrant green bunches without soil splash or pest holes — commanding premium prices in urban markets.

DESCRIPTION

Coriander (Dhania) is India's most essential culinary herb — used daily in millions of households. While coriander grows easily in open fields, the quality difference under Agrifirst's nethouse protection is dramatic: clean, vibrant green leaves without mud splash, pest holes, or yellowing, making it perfect for modern retail and premium market segments.

Why Grow Coriander Under Agrifirst Protection?

- **Daily demand** — India's most consumed fresh herb with unending market demand
- **Premium pricing** — Clean, packaged coriander fetches 2–3x the mandi price in modern retail
- **Rapid cycles** — Harvest every 30–40 days, with year-round production
- **Clean production** — No soil splash, reduced fungal spots, vibrant green color
- **Summer growing** — Nethouse shade prevents premature bolting in hot months

How Agrifirst Helps You Succeed

Agrifirst's shade nethouse is ideal for coriander — providing 35–50% shade that prevents the bolting (premature flowering) triggered by high temperatures and intense light. Our structures keep coriander leaves clean and marketable while extending the growing season into summer months when prices are highest. With Agrifirst's efficient micro-irrigation, farmers produce the consistent quality supply that supermarkets and restaurants demand.

Expected earnings: ₹4–8 lakhs per acre annually with Agrifirst nethouse coriander cultivation.
