

Dragon Fruit

Dragon fruit cultivation in nethouse is booming in India. Exotic superfruit with excellent returns and growing consumer demand.

ABOUT

India's Trendiest Superfruit Under Nethouse Protection

Dragon fruit is India's fastest-growing fruit crop, with prices reaching ₹150–400/kg. Agrifirst nethouse protection accelerates growth, improves fruit quality, and protects against bird and pest damage.

DESCRIPTION

Dragon Fruit has taken India by storm — going from an unknown exotic fruit to a mainstream superfruit with booming demand. With government subsidies supporting cultivation and consumer demand growing 40%+ annually, dragon fruit under Agrifirst's nethouse protection is one of the most exciting opportunities for Indian farmers today.

Why Grow Dragon Fruit Under Agrifirst Protection?

- **Booming demand** — India's fastest-growing fruit market with 40%+ annual demand increase
- **Premium pricing** — ₹150–400/kg in domestic markets
- **Government subsidies** — Significant subsidy support available for dragon fruit cultivation
- **Nethouse benefits** — Protection from birds, excessive sun, and heat stress
- **Long productive life** — Plants produce for 20–25 years with proper care

How Agrifirst Helps You Succeed

Agrifirst's nethouse structures for dragon fruit feature robust pillar-compatible designs with appropriate shade netting (30–40%) that protects fruit from sunburn while maintaining the light levels needed for flowering. Our structures integrate with dragon fruit's concrete/steel pillar growing systems, and our drip irrigation solutions ensure optimal water management for this drought-tolerant but quality-responsive crop.

Expected earnings: ₹10–25 lakhs per acre annually with Agrifirst nethouse dragon fruit cultivation (from year 3 onwards).
