

Passion Fruit

Passion fruit grows well under nethouse protection. Tropical fruit with rising demand for juice, pulp, and fresh consumption in India.

ABOUT

Exotic Passion Fruit for Juice, Pulp & Fresh Markets

Passion fruit is gaining rapid popularity in India for juice, pulp, and fresh consumption. Agrifirst nethouse provides the vine support and pest protection needed for commercial passion fruit farming.

DESCRIPTION

Passion Fruit is an emerging high-value crop in India, driven by growing demand from juice manufacturers, food processors, and health-conscious consumers. The fruit's unique tangy-sweet flavor, rich vitamin content, and versatility make it increasingly popular. Agrifirst's nethouse solutions provide the ideal structure for passion fruit vine cultivation.

Why Grow Passion Fruit Under Agrifirst Protection?

- **Rising demand** — Growing popularity in juice, yogurt, ice cream, and fresh consumption
- **Premium pricing** — ₹80–200/kg for fresh fruit, good returns from pulp processing too
- **Vine support** — Nethouse structure doubles as trellis framework for vines
- **Pest protection** — Protection from fruit flies and stink bugs that damage open-field crops
- **Multi-year production** — Vines produce for 5–7 years once established

How Agrifirst Helps You Succeed

Agrifirst designs nethouse structures that serve dual purpose — providing insect protection while acting as robust trellising for passion fruit vines. Our structures support the vigorous vine growth, and integrated drip irrigation ensures consistent water supply for continuous flowering and fruiting. With Agrifirst's complete growing solutions, farmers enter the profitable passion fruit market with professional-grade infrastructure.

Expected earnings: ₹8–18 lakhs per acre annually with Agrifirst nethouse passion fruit cultivation.
