**2x stronger**

design with 0.75mm thickness

**4x faster**

nursery setup with immediate delivery

### ABOUT

#### Multi-Cell Seedling Tray — Professional Plug Plant Propagation for Commercial Nurseries

Agrifirst Seedling Tray is a professional multi-cell propagation tray for raising uniform, high-quality vegetable, flower, and herb seedlings. The individual cells produce plug plants with intact root balls that transplant with 100% survival — the foundation of successful commercial polyhouse and open-field cultivation.

### DESCRIPTION

**Agrifirst Seedling Tray** is a professional-grade multi-cell propagation tray for commercial nursery seedling production. Each cell produces an individual plug plant with a complete, intact root ball that transplants perfectly — achieving 98–100% field survival rates and giving crops a uniform, vigorous start.

### Key Benefits

- **Perfect Root Balls** — Tapered cells produce compact, intact root systems for shock-free transplanting
- **98–100% Survival** — Plug plants suffer virtually zero transplant mortality vs bare-root seedlings (70–80%)
- **Uniform Crop** — Every plant gets identical root space, producing uniform seedlings for even crop establishment
- **Multiple Cell Options** — 50, 72, 98, 128, 200 cells per tray for different crops and stages
- **Reusable** — UV-stabilized plastic lasts 5+ seasons with proper cleaning
- **Space Efficient** — Maximize nursery space with high-density seedling production

### Technical Specifications

<b>Material</b>	HIPS (High Impact Polystyrene) / PP — UV stabilized
<b>Cell Options</b>	50, 72, 98, 128, 200 cells per tray
<b>Tray Size</b>	540mm x 280mm (standard)
<b>Color</b>	Black
<b>Drain Holes</b>	Yes — bottom of each cell
<b>UV Life</b>	5+ years (with indoor nursery use)
<b>Suitable For</b>	Tomato, capsicum, cucumber, broccoli, cauliflower, lettuce, flower seedlings, herb plugs
