

Spinach

Spinach grows well in nethouse conditions. Leafy green crop with quick harvest cycles for continuous production in India.

ABOUT

Year-Round Spinach Production with Nethouse Protection

Spinach is a quick-growing leafy green with consistent demand across India. Agrifirst nethouse solutions protect spinach from excessive heat, rain, and pests, enabling clean, pesticide-free production with harvest every 25–30 days.

DESCRIPTION

Spinach is one of India's most consumed leafy vegetables, with strong demand in both urban and rural markets. Under Agrifirst's nethouse and polyhouse protection, spinach can be cultivated year-round — including during hot summers and monsoon when open-field crops struggle — ensuring a consistent supply and steady income for farmers.

Why Grow Spinach Under Agrifirst Protection?

- **Rapid harvest cycles** — Ready in 25–30 days, enabling 10–12 harvests per year
- **Year-round production** — Nethouse protection from extreme heat and heavy rain
- **Clean, premium produce** — No soil splash, minimal pests, reduced washing needed
- **Consistent supply contracts** — Reliable production enables contracts with retail chains and processors
- **Low investment entry** — Nethouse is the most affordable protected cultivation option

How Agrifirst Helps You Succeed

Agrifirst's shade nethouse structures with 35–50% shade factor create the ideal cool environment for spinach, even during peak summer. Our structures reduce ambient temperature by 5–8°C, preventing bolting and maintaining leaf quality. With Agrifirst's efficient drip irrigation and nethouse protection, farmers achieve clean, market-ready spinach with minimal input costs.

Expected earnings: ₹5–10 lakhs per acre annually with Agrifirst nethouse spinach cultivation.
