4x easier

trellising for improved crop health

ABOUT

Trellising J-Hook — Quick-Release Plant Support Hook for Greenhouse Crops

Agrifirst Trellising J-Hook is a versatile plant support hook that hangs from overhead trellis wires and holds crop twine at adjustable heights. The J-shaped design allows quick attachment, height adjustment, and crop lowering without untying knots — essential for managing indeterminate tomato, cucumber, and capsicum plants in polyhouse cultivation.

DESCRIPTION

Agrifirst Trellising J-Hook is a practical crop support accessory for vertical trellising in polyhouse environments. The J-hook hangs from the overhead trellis wire and holds the plant twine, allowing simple height adjustment as the plant grows — and easy crop lowering when plants reach the wire height.

Key Features

- **Quick Height Adjustment** — Slide twine through the hook for instant height changes
- **Easy Crop Lowering** — Release twine to lower tall plants without cutting or retying
- **Durable** — Galvanized steel construction for corrosion resistance
- **Reusable** — Lasts multiple crop cycles

Technical Specifications

Material	Galvanized steel wire
Size	Standard greenhouse J-hook
Load Capacity	15+ kg per hook
Packaging	500 / 1000 per pack
