

Tuberose

Tuberose (Rajnigandha) is prized for its fragrance. Protected cultivation improves flower quality and yield for perfume and garland markets.

ABOUT

Fragrant Tuberose for Perfume, Garland & Religious Markets

Tuberose (Rajnigandha) is treasured for its intense fragrance, used in garlands, perfumery, and religious offerings. Agrifirst protected cultivation produces superior quality flowers with higher essential oil content.

DESCRIPTION

Tuberose (Rajnigandha) is one of India's most valued fragrant flowers — essential for wedding garlands, religious offerings, and as a key ingredient in the perfume industry. Under Agrifirst's protected cultivation, tuberose produces more spikes per plant with stronger fragrance and whiter florets, commanding premium prices in flower markets.

Why Grow Tuberose Under Agrifirst Protection?

- **Cultural significance** — Essential for Indian weddings, pujas, and ceremonies
- **Perfume industry demand** — Tuberose essential oil (concrete) commands ₹50,000–1,00,000/kg
- **Better fragrance** — Protected conditions intensify essential oil production in flowers
- **Year-round production** — Nethouse enables flowering beyond the natural summer season
- **Long productive life** — Bulbs produce for 3–4 years from a single planting

How Agrifirst Helps You Succeed

Agrifirst's nethouse structures create optimal growing conditions for tuberose — protecting from excessive heat that reduces spike quality while maintaining the bright, warm environment tuberose thrives in. Our structures also protect delicate white florets from rain spotting, ensuring the pristine white quality that markets demand. With Agrifirst, tuberose farmers maximize both loose flower and essential oil revenue streams.

Expected earnings: ₹6–14 lakhs per acre annually with Agrifirst protected tuberose cultivation.
